Advice from owner, Duane Lumm:

“Any precautionary cleaning is a sanitizing wipe of all horizontal surfaces, high touch areas, light switches, phones (to include any cell phones) door handles and cabinet handles on the backside most importantly.

Any confirmed COVID-19 cases are all of the above sanitizing, but with full PPE (tyvek suits, respirators, and nitrile gloves) with the added HEPA vacuuming of all surfaces to include walls 6' up from floor.

I am happy to answer any questions by phone if you need as well. Right now we are around the clock doing 90% precautionary cleaning and a few confirmed case cleaning.

We are offering FREE sanitizing to any law enforcement police cars. Our product is listed and APPROVED by the EPA & CDC.”

Professional COVID-19 Cleaning Services

Clorox Total 360 (electrostatic treatment) is \$ 0.09 per square foot. We can not complete this for about 3 weeks as Clorox Product is back ordered. However most every business that is closed right now is waiting for this service to be completed prior to RE-Opening. This will actually work out the best and is most cost effective.

Wipe down pre-suspect case is \$ 0.12 SF - \$ 0.15 SF Full clean of a confirmed case is \$ 1.15 SF - \$ 2.25 SF
