Virtual Interactive Business Experience (Software Application) Small Business Solution: Targets small businesses and restaurants to provide greater transparency and engagement in the full customer experience using technology.		Looking for new use cases so costs are negotiable.	HULFT V.I.B.E. integrates with any existing point of sale, inventory, or delivery platform while allowing customers to engage in real-time conversations with local employees within the authentic business/restaurant environment. Using various audio and visual capturing devices, customers will experience "the business vibe" of the actual inside noise while shopping, and in the case of restaurants, while placing an order. The key to this application is its ability to provide just-in-time transparency to all the typical interactions one would experience if shopping or dining in person. This transparency provides additional visibility to environmental health/safety practices that all businesses should be implementing now and in the future. Seeing these practices in action will build trust. HULFT V.I.B.E. allows businesses to begin or expand their e-commerce presence to offer more of a "next best thing to being there" experence, giving patrons additional options to support their local communities.
